-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply:

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Hasegawa.

The patent by Hasegawa (4,864,977) shows an internal combustion engine variable compression ratio system. A piston inner (4) is connected to a connecting rod (8) via a piston pin (7), a piston outer (3) that, while being fitted around the outer periphery of the piston inner so that the piston outer can slide only in the axial direction and having an outer end face facing a combustion chamber. The piston is capable of moving to a low compression ratio position close to the piston inner, a high compression ratio position close to the combustion chamber, and at least one medium compression ratio position between the low compression ratio position and the high compression ratio position. At least two sets of raising means (5,6) are disposed in line in the axial direction between the piston inner and the piston outer. Each set of raising means comprises a movable raising member (4, 3), the movable raising members are individually capable of pivoting between a non-raised position and a raised position around the axis of the piston inner and outer. The piston outer is held at the low compression ratio position when two of the movable raising members are pivoted to the non-raised position. The piston outer is held at the medium compression ratio position

Art Unit: 3747

when only one of the movable raising members is pivoted to the raised position. The piston outer is held at the high compression ratio position when two of the movable raising members are pivoted to the raised position.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Benton whose telephone number is (571) 272-4838. The examiner can normally be reached on M-F 9:30-6:00.
